HonestDiD Sensitivity Analysis: Two Approaches
Rambachan and Roth (2023), working−age (25−64) diabetes mortality
A: Relative Magnitudes
B: Smoothness (FLCI)
Identified Set for ATT (Deaths per 100,000)

Sensitivity Parameter
Notes: Panel A uses relative magnitudes (Mbar controls max pre−trend violation).
Panel B uses smoothness restriction (Delta^SD with FLCI). VCV method: diagonal.
